6.6 Personal Hygiene and Public Health Pledge

Objective:

- To turn health awareness into regular personal habits and a written commitment to responsible daily behaviour.

Method and contribution:

- This is a reflective essay by Pushpraj Bhagwat Patil, Roll No. 12258, dated 13 October 2026. It draws on the campus cleanliness activity and Nasha Mukt Yuva pledge.
- The fourteen commitments cover personal hygiene, food and water safety, preventive habits, community responsibility and mental well-being. The full set is retained on Page 29.

Plan for maintaining the pledge:

Time frame	Planned action
Daily	Handwashing, safe food and water, a clean living space and a regular sleep routine.
Weekly	Plan physical activity and check in with friends or hostel-mates.
Monthly	Look for a campus hygiene or health-awareness activity and review personal habits.
Long term	Carry responsible habits into professional and community life.

Expected outcome and review:

- A short weekly checklist can record which habits were followed and what interrupted them. Missed actions should lead to realistic adjustments. The commitments express intentions and expected benefits, not proof of perfect compliance or measured health improvement.

6.7 Health and Hygiene Awareness Write-up

Objective:

- To explain the relationship between safe water, sanitation, hygiene and public health in simple language.

Method and content:

- This literature-based contribution by Pushpraj Bhagwat Patil, Roll No. 12258, is dated 13 October 2026. WHO information was used to check the central health messages. [1]
- The write-up covers safe food and drinking water, clean hands and shared surfaces, waste and drainage, and hygienic personal surroundings. It does not report a field survey or a measured awareness session.

Government programmes discussed:

Programme	**Role discussed**
Swachh Bharat Mission	Sanitation and cleanliness.
Jal Jeevan Mission	Household drinking-water access.
POSHAN Abhiyaan	Nutrition.
National Health Mission	Broader public-health services.

These roles are complementary; the report does not evaluate current coverage or outcomes. [2-5]

Recommended actions and expected outcome:

- Keep water covered, use safe food-handling habits, use bins responsibly, avoid stagnant water and report damaged facilities. Place brief reminders near washbasins and bins, supported by regular maintenance.
- The intended outcome is better understanding of everyday prevention. No pre-test, post-test, survey or follow-up health measurement was carried out.
